

Final Report of Boiling Point Project

Kapunda High School:-

Class Name:- 8Sc1CHD

After looking at the World project results we concluded that:-

- There was no connection between Room Temperature and boiling pt.
- There was a connection between elevation and the boiling point.
 - As the elevation increased the boiling point decreased.
 - This gradual decrease can be seen in the graph below.

There are the odd results but overall the trend is downwards.

After grouping elevations together and finding average elevations, a graph was made of these results. This is shown below. [It is easier to see the decrease.]
