

Bucket Buddy Project  
Mrs. Mahanes' Second  
Pittsfield Elementary  
Pittsfield, New Hamp  
First Data Report

May 8, 2014

Our hypothesis is that there are different animals on different continents. So there are different creatures in our pond. We think that it is safe for us to swim in this pond. We think that the creatures we collected were interesting and cool. We think that there are different creatures because the weather is different in each continent. We found out that animals and insects have many different features. We found out that larva are different from the adults in many ways. The larva are like worms and the adults have wings and do not look like worms. The adults can fly.

Some of the creatures are so small that we could hardly see them. We used magnifying glasses and a microscope to see them up close. We found an interesting bug called a damselfly and we found a mosquito larva.

Pond Creature	Count
Amphipod or Scud	0
Midge Larva	1
Snail	0
Damselfly Nymph	3
Bristle Worm	1
Water Flea	1
Mayfly Nymph	16
Mosquito Larva	2
Dragonfly Nymph	2
Caddisfly Larva	0

Unknown Creature 2	0
Unknown Creature 1	0
Boatman beetles	2
	28 total creatures

We are looking forward to reading others' data reports to see if our hypothesis is correct.
